a standard source of information of functions of one complex variable this text has retained its wide popularity in this field by being consistently rigorous without becoming needlessly concerned with advanced or overspecialized material difficult points have been clarified the book has been reviewed for accuracy and notations and terminology have been modernized chapter 2 complex functions features a brief section on the change of length and area under conformal mapping and much of chapter 8 global analytic functions has been rewritten in order to introduce readers to the terminology of germs and sheaves while still emphasizing that classical concepts are the backbone of the theory chapter 4 complex integration now includes a new and simpler proof of the general form of cauchy's theorem there is a short section on the riemann zeta function showing the use of residues

in a more exciting situation than in the computation of definite integrals

although the fields medal does not have the same public recognition as the nobel prizes they share a similar intellectual standing it is restricted to one field that of mathematics and an age limit of 40 has become an accepted tradition mathematics has in the main been interpreted as pure mathematics and this is not so unreasonable since major contributions in some applied areas can be and have been recognized with nobel prizes a list of fields medallists and their contributions provides a bird s eye view of mathematics over the past 60 years it highlights the areas in which at various times greatest progress has been made this volume does not pretend to be comprehensive nor is it a historical document on the other hand it presents contributions from fields medallists and so provides a highly interesting and varied picture the second edition of fields medallists lectures features additional contributions from the following medallists kunihiro kodaira 1954 richard e borcherds 1998 william t gowers 1998 maxim kontsevich 1998 curtis t mcmullen 1998 and vladimir voevodsky 2002

although the fields medal does not have the same public recognition as the nobel prizes they share a similar intellectual standing it is restricted to the field of mathematics and an age limit of 40 has become an accepted tradition this volume presents contributions from fields medallists

this series discusses how the major fields of science developed during specific time periods each volume focuses on a range of years and includes developments in exploration life sciences mathematics physical sciences and technology when the series is completed the seven volumes will cover 2000 b c to the present outstanding reference sources american libraries may 2001

originating with the pioneering works of p fatou and g julia the subject of complex dynamics has seen great advances in recent years complex dynamical systems often exhibit rich chaotic behavior which yields attractive computer generated pictures for example the mandelbrot and julia sets which have done much to renew interest in the subject this self contained book discusses the major mathematical tools necessary for the study of complex dynamics at an advanced level complete proofs of some of the major tools are presented some such as the bers royden theorem on holomorphic motions appear for the very first time in book format an appendix considers riemann surfaces and teichmüller theory detailing the very latest research the book will appeal to graduate students and researchers working in dynamical systems and related fields carefully chosen exercises aid understanding and provide a glimpse of further developments in real and complex one dimensional dynamics

vitushkin s conjecture a special case of painlevé s problem states that a compact subset of the complex plane with finite linear hausdorff measure is removable for bounded analytic

functions if and only if it intersects every rectifiable curve in a set of zero arclength measure chapters 1-5 of the book provide important background material on removability analytic capacity hausdorff measure arclength measure and garabedian duality that will appeal to many analysts with interests independent of vitushkin's conjecture the fourth chapter contains a proof of denjoy's conjecture that employs melnikov curvature a brief postscript reports on a deep theorem of tolsa and its relevance to going beyond vitushkin's conjecture this text can be used for a topics course or seminar in complex analysis to understand it the reader should have a firm grasp of basic real and complex analysis

this classic book helps students learn the basics in physics by bridging the gap between mathematics and the basic fundamental laws of physics with supplemental material such as graphs and equations mathematical methods for physics creates a strong solid anchor of learning the text has three parts part i focuses on the use of special functions in solving the homogeneous partial differential equations of physics and emphasizes applications to topics such as electrostatics wave guides and resonant cavities vibrations of membranes heat flow potential flow in fluids plane and spherical waves part ii deals with the solution of inhomogeneous differential equations with particular emphasis on problems in electromagnetism green's functions for poisson's equation the wave equation and the diffusion equation and the solution of integral equations by iteration eigenfunction expansion and the fredholm series finally part iii explores complex variable techniques including evaluation of integrals dispersion relations special functions in the complex plane one sided fourier transforms and laplace transforms

award winning monograph of the ferran sunyer i balaguer prize 2004 this book studies regularity properties of mumford shah minimizers the mumford shah functional was introduced in the 1980s as a tool for automatic image segmentation but its study gave rise to many interesting questions of analysis and geometric measure theory the main object under scrutiny is a free boundary  $K$  where the minimizer may have jumps the book presents an extensive description of the known regularity properties of the singular sets  $K$  and the techniques to get them some time is spent on the  $C^1$  regularity theorem with an essentially unpublished proof in dimension 2 but a good part of the book is devoted to applications of a bonnet's monotonicity and blow up techniques in particular global minimizers in the plane are studied in full detail the book is largely self contained and should be accessible to graduate students in analysis the core of the book is composed of regularity results that were proved in the last ten years and which are presented in a more detailed and unified way

this book is the fifth and final volume of raoul bott's collected papers it collects all of bott's published articles since 1991 as well as some articles published earlier but missing in the earlier volumes the volume also contains interviews with raoul bott several of his previously unpublished speeches commentaries by his collaborators such as alberto cattaneo and jonathan weitsman on their joint articles with bott michael atiyah's obituary

of raoul bott loring tu s authorized biography of raoul bott and reminiscences of raoul bott by his friends students colleagues and collaborators among them stephen smale david mumford arthur jaffe shing tung yau and loring tu the mathematical articles many inspired by physics encompass stable vector bundles knot and manifold invariants equivariant cohomology and loop spaces the nonmathematical contributions give a sense of bott s approach to mathematics style personality zest for life and humanity in one of the articles from the vantage point of his later years raoul bott gives a tour de force historical account of one of his greatest achievements the bott periodicity theorem a large number of the articles originally appeared in hard to find conference proceedings or journals this volume makes them all easily accessible it also features a collection of photographs giving a panoramic view of raoul bott s life and his interaction with other mathematicians

presents over 1 000 entries covering theories discoveries concepts and definitions and includes biographical entries on prominent mathematicians from antiquity to the present
